Biological Description

Description	1. (+)-(3R,8S)-Falcarindiol is a potential new anticancer agent that exerts its activity through inducing ER stress and apoptosis. 2. Falcarindiol induces immunosuppressive effects in vitro and in vivo and might be a novel therapy for autoimmune or allergic diseases. 3. Falcarindiol has protective effect against CCl(4) toxicity , in part, be explained by anti-lipid peroxidation activity associated with the induction of the GSTs including GSTA4.
